Re: Legion Sports Turf Product - Fiber Processing Aid

Dear Valued Customer:

Thank you for your interest in Shaw's Legion sports turf field product. We understand that an important consideration in choosing this product is the confidence that it will not be made with PFAS based materials, particularly the use of fluoropolymer based processing aids in the fiber extrusion process.

We can confirm that the Legion sports turf field that Shaw will deliver to the Town of Arlington will be constructed using monofilament and tape turf fibers that were produced using only non fluoropolymer based processing aids.

If you have any questions about this statement, please contact your account representative or email us at sustainability@shawinc.com
